

# How **business expenses** are evolving.

Real behavioural data from the Findity platform reveals a shift toward **smarter, more sustainable expenses.**

## 1 Business travel is back

But we're not staying as long: average trip duration is down **-9%**

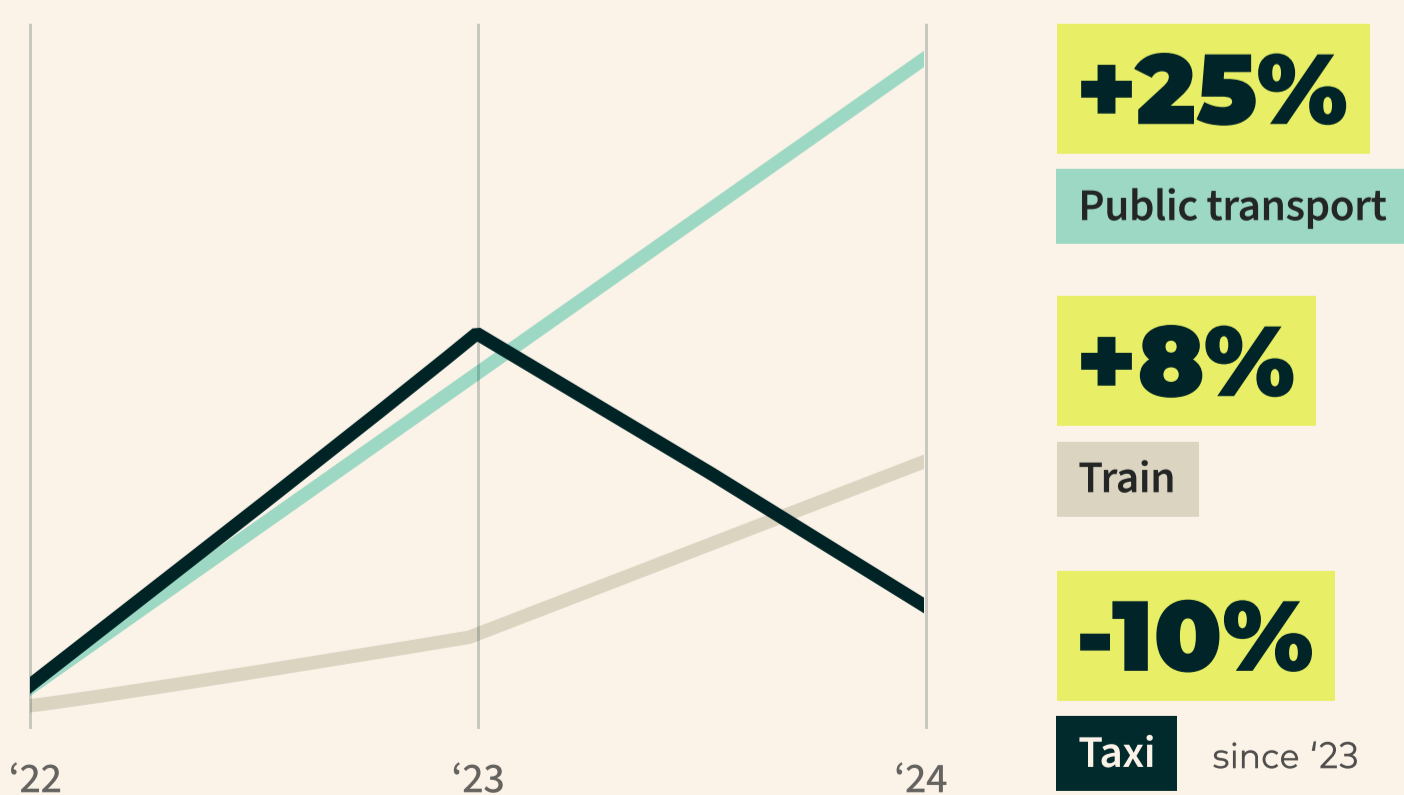

## 2 Flights are taking off

Flight expenses have increased **+14%** since 2022, echoing the return of business travel. It makes sense—international trips often require flying.

## 3 Fewer taxi rides, shift to sustainable travel

A clear and steady **shift toward more sustainable travel choices** for local and regional journeys.

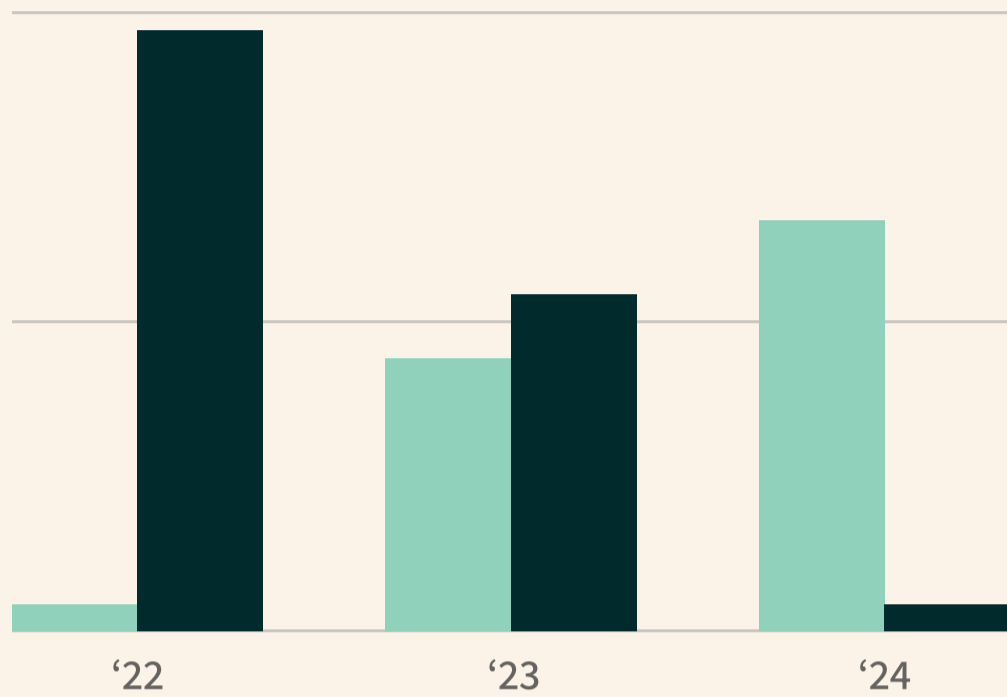

## 4 Mileage up, fuel down

**+14%**

Mileage claims

**-22%**

Fuel receipts

A likely result of more **businesses switching to electric or hybrid vehicles.**

## 5 Entertainment: less frequent, more premium

Entertainment expenses are **occurring less often.**

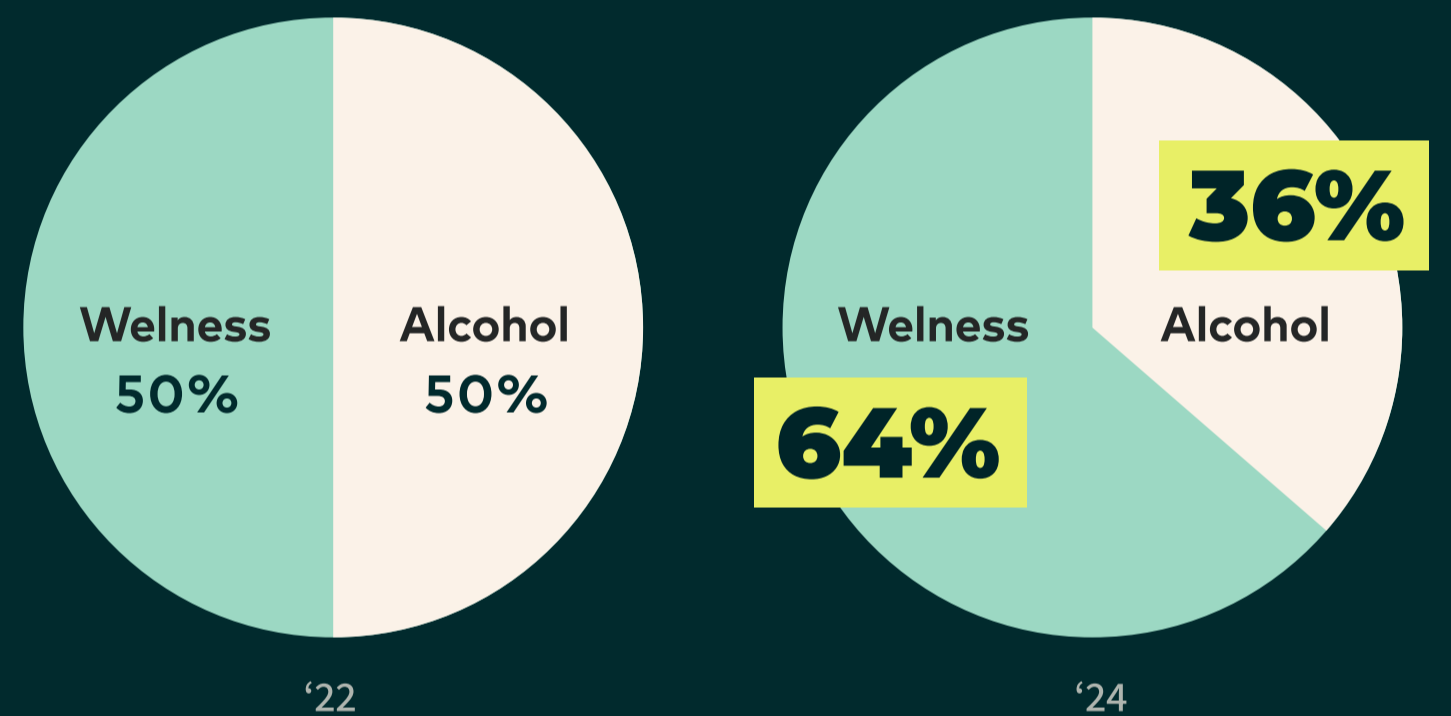

But when they do occur, the average spend is slightly higher: cost per occasion is up **+5%**. **Quality over quantity?**

## 6 Wellness is gaining ground

In 2022, wellness and alcohol expenses were split 50/50 when compared directly. By 2024, the balance shifted to 64% wellness / 36% alcohol.

**A reflection of broader business priorities—well-being for employees is taking the lead.**

## Key takeaways

Businesses are making more thoughtful choices with their expenses. While business travel is on the rise, trips are shorter and more purposeful. We're seeing a shift toward sustainable travel—more public transport, more trains—and a clear focus on employee well-being.

**Overall, expense behaviour is becoming more mindful—balancing efficiency, sustainability, and wellness.**
